

*Towards the political unity of the planet*

*Short presentation*

## **Towards the political unity of the planet**

At the present time, the political organisation of the planet is based on 197 sovereign Nation-states, and a kind of “club” without actual power or means : the 1945 United Nations Organisation ( UN ). This state of things does not allow the global community, which has now become a reality, to deal efficiently with the major challenges of our time : preserving the environment and bio-diversity, neutralizing regional conflicts and reducing armament, regulating trade at a global level, reducing structural inequalities between different areas of the globe and controlling mass migrations, watching human rights seriously throughout the world.

Well aware of this situation, *The World Citizens' March* gathers together all men and women of our time who are determined to lead the representatives of their countries to sign a *New Charter of the United Nations*. This *New Charter* is to give birth to *The World Federation of Nations*, the only institution able to give the world the three components without which no human community can really survive and develop correctly :

- . *Rules* observed by all
- . *Authority* that ensures the respect of the Rules and works for common interest.
- . *Representative group*, elected by the population, which edicts the Rules, and mandates and controls the Authority. It is Democracy.

All inhabitants of the planet who feel they are *citizens of the world* are invited to assume their rights and responsibilities by joining *The World Citizens' March towards the political unity of the planet*.
